Email Forensic Investigation Report

Case ID: CASE-20260905-110107-86A31704 · Generated: 2026-09-05T11:01:40.029656+00:00

RISK SCORE	SEVERITY	FINDINGS
22/100	LOW	6

1. Evidence Preservation

Source file	78fbe473-eb8b-499b-84e6-6d56b96c64cc_legitimate.eml
Evidence SHA-256	b04663d201209003a84a282949f03888cb8c360037d86012b03f10304f698414
Analysis timestamp	2026-09-05T11:01:07.042234+00:00

2. Email Metadata

Subject	Team Meeting Tomorrow
Date	Sat, 30 Aug 2025 09:00:00 +0000
Message-ID	Not available
From	hr@company.com
Reply-To	Not available
Return-Path	Not available

3. Sender Identity Analysis

No items recorded.

4. SPF / DKIM / DMARC

SPF	pass
DKIM	pass
DMARC	pass
DMARC assessment	likely_fail
Visible From domain	company.com
DMARC DNS policy	reject

5. Relay Path Reconstruction

Earliest visible public hop	Not available
Source confidence	low
Limitation	Visible email relay infrastructure is not proof of a person's identity or exact physical location.

Hop	From	By	IP	Scope	Trusted
1			10.0.0.5	private	NO

6. Indicators of Compromise

Domains	1
URLs	0
IP addresses	1
Attachments	0

7. Forensic Findings

Severity	Finding	Evidence / Detail
HIGH	Not available	Not available
LOW	Not available	Not available
MEDIUM	Not available	Not available
LOW	Not available	Not available
LOW	Not available	Not available
LOW	Not available	Not available

8. Forensic Limitations

- IP geolocation and ASN data describe approximate network infrastructure context, not a confirmed human sender or attacker location.
- Authentication-Results headers are receiver-reported evidence and may differ from independent checks.
- A single indicator is not enough to prove malicious intent; findings should be evaluated together.

9. Investigator Summary

SatGuard analyzed case **CASE-20260905-110107-86A31704** using preserved email evidence, authentication results, sender identity indicators, relay headers, extracted IOCs, and available threat-intelligence context. The result is an evidence-based forensic assessment and should not be interpreted as proof of the human identity or exact physical location of an attacker.

Human review is recommended before any containment, blocking, or other operational action.
